📍 London, UK ✉ Asteria0526@gmail.com [🔗](#)

Design Engineering | CAD | Prototyping | Human-Centred Design

Imperial College London Design Engineering student with hands-on experience in factory layout planning, CAD, product development, and prototyping. Applies human-centred design, manufacturing, ergonomics, and workflow analysis to practical challenges. Strong analytical foundation (87.5% in Engineering Mathematics; 8th in the cohort) and experience communicating concepts through CAD and physical prototypes.

Education

Imperial College London London, UK Oct 2025–Jun 2029
MEng Design Engineering (expected)

- First-year coursework across human-centred design, product development, engineering modelling, materials and manufacturing, and prototyping.
- Current Year 1 average: 70%+; scored 87.5% in Engineering Mathematics, ranking 8th in the cohort.

Concord College Shrewsbury, UK Sep 2023–Jun 2025
A-Levels: A*A*A*A (Mathematics, Chemistry, EPQ, Further Mathematics)

Experience

Vossloh Fastening Systems (China) Co., Ltd. — Production Department Intern Jul 2026–Aug 2026
Kunshan, China Factory layout, AutoCAD, workflow optimisation

- Developed a revised equipment-layout proposal for part of the factory, planning equipment relocation and the addition of a pedestrian walkway to improve space utilisation and movement through the area.
- Evaluated workflow, worker access, ergonomics, and fatigue when positioning equipment, balancing efficient use of space with practical production needs.
- Produced an AutoCAD layout communicating the proposed equipment and walkway locations to production stakeholders.
- Designed a separate tool-storage plan to improve organisation, visibility, access, and retrieval efficiency.

Blue Education — Design Engineering Tutor Jun 2026–Present
Remote Admissions, interview preparation, supercurricular and project support

- Support applicants with Design Engineering admissions and interview preparation, helping them structure clear responses around motivation, design thinking, and problem-solving.
- Guide supercurricular development and design projects through structured feedback on user needs, iteration, reflection, and project communication.

Selected Projects

ACE Workshop Induction Redesign — Service Design & Gamified Training 2025–2026
User research, gamified prototype, system design

- Mapped an end-to-end workshop induction flow using interviews, observation, and journey mapping to identify student pain points and system requirements.
- Developed a scenario-based gamified induction prototype with knowledge checks; defined evaluation criteria and a proposed rollout pathway for the next academic year.

Entia Home Test Packaging Optimisation — Packaging & Commercial Constraints Jan 2026–Mar 2026
Packaging, cost constraints, concept development

- Developed packaging redesign directions for a home blood-testing device, balancing cost, usability, protection, presentation, storage efficiency, and commercial constraints.
- The team's final packaging design was selected by Entia for use in future production.

Asu Desk Tidy — Original Desktop Product Design Project Sep 2024–Feb 2025
Needs definition, CAD, prototyping

- Defined user needs for desk organisation and translated them into a physical product concept integrating storage, display, and daily-use features.
- Used Fusion 360 and 3D-printed prototypes to test dimensions, support angles, assembly tolerances, and design validation through iteration.

Technical Skills

CAD & prototyping: AutoCAD, Fusion 360, Bambu Studio, 3D printing, physical prototyping
Engineering & design: factory layout planning, spatial optimisation, ergonomics, workflow analysis, human-centred design, product development, requirements analysis, manufacturing awareness, visual communication
Digital tools: Figma, FigJam, Excel / Google Sheets, Adobe InDesign, Procreate
Languages: Mandarin Chinese (native), English (IELTS 8.0; studying and living in the UK)
